

## DISPLAY & LED FLEXI-STRIPS

# ROBUS®

### VEGAS LED SINGLE COLOUR, RGB AND RGB+W FLEXI-STRIP WITH STANDARD OR WI-FI CONTROLLERS

This range of LED flexi-strip consists of single colour warm or neutral white, RGB or RGBW strip which can be ordered by the metre. This is a system, which when used with appropriate drivers and controllers provides a superb lighting effect for domestic, retail, commercial or entertainment venues. Accessory amplifiers allow the system to be extended to almost unlimited size

The Robus Connect App and Wi-Fi controllers supplement the system for those who want to control the flexi-strip using their mobile from anywhere with a Wi-Fi or Data connection

#### Applications:

- Restaurants, Bars, Hotels, Clubs
- Over/under wall cabinet/counter displays
- Ceiling and wall features
- Feature illumination
- Window dressing

ROBUS CONNECT  
VEGAS CONNECT

NEW!

#### Features & Benefits:

- The range can be ordered in reels of 10, 30 and 50 metres which is ideal for a stocking wholesaler or approved installer
- Alternatively, the flexi-strip can be ordered by the metre supplied by your local electrical wholesaler. They will also supply bespoke system design lengths with control components as required
- The range includes Warm and Neutral white, RGB and RGB+W, which provides a range of solutions from simple dimmable single colour to exciting multi-colour mode combinations
- Available in 12 or 24VDC High, Medium or Low density the range provides impressive lighting solutions for low cost domestic or high specification homes, retail, entertainment venues or commercial premises
- IP20 or IP67 rated versions of all variants provide standard or higher ingress protection for wet areas such as bathrooms or water features
- The flexi-strip can also be linked with DMX 512 control systems for extended control functionality for theatre type applications
- A range of connection packs provide start and linking connection for complex flexi-strip shapes to be installed
- A complete range of dimmable and non-dimmable drivers, and controllers with remote control or using local Wi-Fi provide the extended control options you would expect from this professional system
- Amplifiers are also available to extend the system almost without limit
- The flexi-strip can also be linked with DMX 512 control systems for extended control functionality for theatre type applications
- A full range of aluminium extrusion in lengths of 2m compliment the system to provide mechanical protection for the strip where installed in positions where it might be damaged such as under stair tread nosing's
- The LED's used are of high quality, being tested to IES LM80, have a rated LED life of 30,000 hours and carry the 3 year Robus warranty
- The LED's run cool so produce little infra-red which together with no ultra-violet in the light beam means they won't burn or damage sensitive fabrics or displays and won't burn sensitive skin if touched

## DISPLAY & LED FLEXI-STRIPS

### VEGAS LED SINGLE COLOUR, RGB AND RGB+W FLEXI-STRIP WITH STANDARD OR WI-FI CONTROLLERS

# ROBUS®

#### Installation Notes subject to rules below:

Multiple lengths of flexi-strip can be supplied directly, or via a controller or amplifier, from a single driver up to its maximum power

For systems using a dimmable driver or controller, once the driver maximum power is reached, the output anywhere downstream of the controlling device should be sampled and fed into a powered amplifier to supply subsequent strip

Only recommended dimmers should be used with Dimmable drivers as poor performance may result

RGB flexi-strip can be wired direct to a driver for Primary and Secondary static colours

Amplifiers nor controllers are required for non-dimming white or static colour RGB flexi-strip

More than one controller or dimmable driver can produce "sync issues" or slightly different dimmed brightness

Powered amplifiers are recommended to be used in the above situation

Unlimited numbers of Powered Amplifiers can be used to boost and repeat the signal to additional flexi-strip

Long "low voltage" cable runs from a driver, amplifier or controller will have volt drop which should be factored into the design

Volt drop calculation is dependent on cable type and design and can be supplied by the cable manufacturer

#### IMPORTANT RULES:

1. Flexi-strip should not be connected together to exceed the maximum continuous run length in the data table
2. Drivers, Controllers or Amplifiers rated power should not be exceeded

Please also refer to the Vegas brochure for comprehensive additional information

### LED Flexi-Strip and Component Simple Topology For 12/24VDC and IP20/67
